1. Five patients with multiple myeloma (~~three of whom had shown~~ with extramedullary plasma cytoma and one of whom had shown with plasma cell leukemia) were examined for this study. The results are summarized in Table 1 ~~and examined in this study.~~

2. The results of this study ~~demonstrated~~ indicate that protein synthesis as reflected by reutilization of was suppressed but protein breakdown was not affected in DIC. ~~opposing~~ This finding contradicts that of our previous result study where solely in which only apparent proteolysis was measured. ~~to~~ The study concluded that acceleration of proteolysis took place in DIC.

3. Disseminated intravascular clotting (DIC) was detected by using special equipment supplied by Biorad-Rad Laboratories (Hercules, CA).
